

Hy-Weigh™ is a portable Container weighing system, designed to weigh Containers at the point of packing in your facility.

DO YOU NEED TO WEIGH CONTAINERS TO COMPLY WITH SOLAS?

Hy-Weigh™ makes weighing Containers a simple and easy task.

Using four, corner hydraulic elevation jacks, Hy-Weigh™ simply elevates the Container to allow a simple weighing process to take place.

Hy-Weigh™ has the capability to weigh a loaded container before transportation and displays the weight as a digital read-out for recording of verified gross mass on your shipping documentation.

Hy-Weigh™ removes the need for dedicated Container craneage and is easily deployed and moved within your facility, as all of the equipment is self-contained on its own specially designed pallet.

Hy-Weigh™ utilises simple colour coding systems to identify the corners of the Container and the control panel allows for individual corner raising and lowering. The process takes approximately 10 minutes to deploy the system and move a Container.

The product is manufactured in the United Kingdom to rigorous quality standards (ISO 9001) and has been CE Marked and product tested by TUV. The key principle in the design of Hy-Weigh™ is simplicity. We have designed a product with the following benefits:- simple and easy to use, intuitive controls, robust construction, high reliability, no complex software or electronics.

Capacity up to 40ft/32 tonnes - TÜV/CE marked - Simple 2 man operation - Colour coded hoses - Easy storage & handling - Patent Pending - Container weighing - Removes need for craneage
